## Harvestable Rights (central inland-draining catchments) Order 2022

under the

Water Management Act 2000

I, KEVIN ANDERSON, Minister for Lands and Water, in pursuance of section 54 of the *Water Management Act 2000*, make the following Order.

Dated 12 May 2022

KEVIN ANDERSON, MP  
**Minister for Lands and Water**

### **Explanatory note**

This Order is made under section 54 of the *Water Management Act 2000*. The object of this Order is to (amongst other things) constitute land as a harvestable rights area, specify the kind of water that may be captured and stored in the area in exercise of harvestable rights, and specify the method for calculating the maximum harvestable right volume for works constructed or used in exercise of harvestable rights on landholdings in the area.

## **1 Name of Order**

This Order is the *Harvestable Rights (central inland-draining catchments) Order 2022*.

## **2 Commencement**

This Order commences on the day on which it is published on the NSW legislation website.

## **3 Constitution of land, name of area and fixing of boundaries**

- a) The land identified as 'Central inland-draining catchments harvestable rights area' on the map at Annexure A (available on the Department's website) is:
- i. constituted as a harvestable rights area with the boundaries as shown on the map, and
  - ii. named the 'Central inland-draining catchments harvestable rights area'.
- b) The harvestable rights area comprises all water sources to which the following water sharing plans (as amended or replaced from time to time) apply, except those water sources or parts of water sources located in the Western Division of the State of NSW to which the order titled 'Harvestable rights – Western Division', published on 31 March 2006 in the Government Gazette No. 40, pp 1628 applies:
- i. *Water Sharing Plan for the Barwon-Darling Unregulated River Water Source 2012*
  - ii. *Water Sharing Plan for the Castlereagh Unregulated River Water Sources 2011*
  - iii. *Water Sharing Plan for the Gwydir Unregulated River Water Sources 2012*
  - iv. *Water Sharing Plan for the Intersecting Streams Unregulated River Water Sources 2011*
  - v. *Water Sharing Plan for the Lachlan Unregulated River Water Sources 2012*
  - vi. *Water Sharing Plan for the Macquarie Bogan Unregulated Rivers Water Sources 2012*
  - vii. *Water Sharing Plan for the Murray Unregulated River Water Sources 2011*
  - viii. *Water Sharing Plan for the Murrumbidgee Unregulated River Water Sources 2012*
  - ix. *Water Sharing Plan for the Namoi and Peel Unregulated Rivers Water Sources 2012*
  - x. *Water Sharing Plan for the NSW Border Rivers Unregulated River Water Sources 2012*
- c) This order only applies to landholdings within the harvestable rights area.

## **4 Kind of water and type and location of works**

- a) The kind of water that may be captured and stored in the harvestable rights area in exercise of harvestable rights is rainfall runoff.
- b) The type of water supply work that may be used by a landholder to capture and store harvestable rights water is a dam.
- c) A harvestable rights dam cannot be constructed or used if, at the time of construction or first use of the harvestable rights dam, the dam is:
- i. on, in or within 40 metres (measured perpendicularly) of any river or stream that is not a minor stream

- ii. on any floodplain
- iii. on or within 3 kilometres upstream, including in or within stream and within the catchment generally, of any Ramsar wetland.

**Note:** *dam, harvestable rights area, harvestable rights dam, harvestable rights water, landholder, minor stream, floodplain* and *Ramsar wetland* are defined in paragraph 8.

## **5 Calculation of maximum harvestable right volume and accounting for water in mixed-rights dams**

- a) The maximum harvestable right volume for a landholding is to be calculated in accordance with the method set out in Schedule 1 and by reference to 10% of the average annual regional rainfall runoff on the landholding.
- b) The maximum harvestable right volume for a landholding is expressed as a dam capacity (in megalitres).

**Note:** Section 54(3) of the Act provides that the kind of ways in which a maximum harvestable right volume for landholdings in a harvestable rights area may be expressed includes by reference to the capacity of water supply works.

- c) Despite subparagraph 5 a), if a landholding resulted from a subdivision approved by a relevant planning authority before 1 January 1999 and the maximum dam capacity for the landholding calculated in accordance with Schedule 1 is less than one megalitre, the maximum dam capacity for that landholding is taken to be one megalitre.
- d) The method for accounting for water that is captured or stored in mixed-rights dams is set out in Schedule 2.

**Note:** *landholding*, and *mixed-rights dam* are defined in paragraph 8.

## **6 Rules about purposes for which water may be captured, taken, stored or used**

- a) If a landholder constructs and uses, or uses, a harvestable rights dam, the water captured and stored in that dam may be taken and used for any purpose.
- b) If a mixed-rights dam captures and/or stores water taken in the following circumstances, all water captured and/or stored in that dam may only be taken and used for the purposes of domestic consumption and stock watering:
  - i. in the exercise of a domestic and stock right under section 52 of the Act,
  - ii. under a domestic and stock access licence or a licence granted under Part 5 of the *Water Act 1912* for stock and domestic purposes,
  - iii. under an exemption provided for in clauses 6 and 7 of Schedule 1 to the *Water Management (General) Regulation 2018*.
- c) Water cannot be moved from a harvestable rights dam to an excluded work or to any other dam on the landholding.

**Note:** *mixed-rights dam, domestic consumption* and *stock watering* are defined in paragraph 8.

## **7 Arrangements for permitted shared use of a harvestable rights dam that straddles landholdings**

- a) The shared use of a single harvestable rights dam by two or more landholders is permitted where the dam straddles their landholdings.

- b) The method of apportioning the capacity of a harvestable rights dam where the dam straddles the landholdings of two or more landholders is to apportion the capacity of the dam between each landholding in proportion to the surface area of the water stored on the respective landholding when the dam is full.

## 8 Dictionary

In this Order:

**Act** means the *Water Management Act 2000*.

**dam** for the purposes of this Order excludes an excluded work.

**dam reliability factor** is a number determined by the Minister for a location and reflects a measure of reliability of water capture and supply for that location.

**Department** means the Department of Planning and Environment.

**domestic consumption** has the same meaning as in section 52 of the Act.

**excluded work** means any of the following –

- a) a dam identified as an excluded work in clauses 1 - 4 of Schedule 1 to the *Water Management (General) Regulation 2018*
- b) a dam that cannot capture rainfall runoff.

**floodplain** has the same meaning as under the Act.

**the harvestable rights area** means the harvestable rights area constituted and named at paragraph 3.

**harvestable rights dam** means a dam or proportion of a dam on a landholding in the harvestable rights area used in the exercise of harvestable rights.

**harvestable rights multiplier** is a number determined by the Minister that represents 10% of the average annual regional rainfall runoff in megalitres per hectare for a given locality, as adjusted to take into account evaporation, periods between runoff-producing rainfall events and assumed demands on harvestable rights dams.

**harvestable rights water** is water captured, stored, taken and used in the exercise of harvestable rights.

**hydroline spatial data** has the same meaning as in clause 3(1) of the *Water Management (General) Regulation 2018*.

**landholder** has the same meaning as under the Act.

**landholding** has the same meaning as under the Act.

**minor stream** means the following:

- a) any stream or part of a stream:
  - i. identified as a watercourse in the hydroline spatial data, and

- ii. that is a first or second order stream, or part of such a stream, determined in accordance with the Strahler system set out in Schedule 2 to the *Water Management (General) Regulation 2018*, and
  - iii. that does not maintain a permanent flow of water, being a visible flow which occurs on a continuous basis, or which would so occur if there were no water extractions, diversions or obstructions of flows upstream, and
- b) any stream or part of a stream which is not identified as a watercourse in the hydroline spatial data.

**Note:** *hydroline spatial data* is defined above.

***mixed-rights dam*** means a dam for capturing and storing harvestable rights water and other water that has been lawfully taken from a water source.

**Notes:**

1. Section 53(2) of the Act provides for the use of mixed-rights dams that do not exceed the maximum harvestable rights volume for the landholding calculated in accordance with the method in Schedule 1.
2. Section 53(3) of the Act specifies the circumstances in which harvestable rights water and other water lawfully taken from a water source can be captured and stored in a dam or dams that exceeds the maximum harvestable rights volume for the landholding calculated in accordance with the method in Schedule 1.

***Ramsar wetland*** means a wetland included, from time to time, in the List of Wetlands of International Importance of the International Convention on Wetlands (Ramsar, Iran, 1971).

***stock watering*** has the same meaning as in section 52 of the Act.

## **Schedule 1    Method for calculating the maximum capacity of harvestable rights dams on a landholding**

- a) The maximum capacity of a harvestable rights dam or dams on a landholding (in megalitres) is to be calculated using the online 'maximum harvestable rights dam capacity calculator' on the WaterNSW website (online calculator).

**Note:**

1. The online calculator gives one dam capacity output for landholdings in the harvestable rights area – representing up to 10% of the average annual regional rainfall runoff for the landholding.
2. The online calculator is used in the method for accounting for harvestable rights water in mixed-rights dams in Schedule 2.

- b) The method applied by the online calculator is as follows:

- (i) identify the location of the landholding
- (ii) identify the total size of the landholding in hectares (being only that part within the harvestable rights area)
- (iii) to calculate the capacity for a harvestable rights dam or dams which represents up to 10% of the average annual regional rainfall runoff on the landholding - multiply (ii) by the harvestable rights multiplier.

**Note:** *harvestable rights multiplier* is defined in paragraph 8.

## Schedule 2 Method for accounting for harvestable rights water captured and stored in mixed-rights dams

This schedule sets out the method for accounting for harvestable rights water that is captured or stored in mixed-rights dams.

Water NSW uses this method to determine the maximum volume of harvestable rights water in mixed-rights dams in megalitres per year.

The method is:

- (i) calculate the maximum capacity for a harvestable rights dam or dams on a landholding in accordance with Schedule 1
- (ii) calculate the capacity of any existing harvestable rights dam or dams on the landholding
- (iii) subtract (ii) from (i)
- (iv) divide the dam capacity value calculated at (iii) by the dam reliability factor shown in Column B of the table below for the corresponding harvestable rights multiplier that applies at the location of the landholding. If a harvestable rights multiplier for a landholding is between any two values specified in Column A, the relevant corresponding dam reliability factor will also be between the corresponding values specified in Column B.

### Notes:

- a) Section 53(2) and (3) of the Act provide for the construction and use of mixed-rights dams.
- b) **harvestable rights multiplier** and **dam reliability factor** are defined in paragraph 8.

Column A	Column B
Harvestable rights multiplier	Dam reliability factor
0.050	2.50
0.051	2.32
0.052	2.17
0.053	2.04
0.054	1.93
0.055	1.83
0.056	1.75
0.057	1.68
0.058	1.61
0.059	1.55
0.060	1.50
0.062	1.41
0.064	1.33
0.066	1.27
0.068	1.21
0.070	1.17
0.075	1.07
0.080	1.00
0.090	0.90
0.10	0.83
0.11	0.79
0.12	0.75

0.13	0.72
0.14	0.70
0.15	0.68
0.16	0.67
0.17	0.65
0.18	0.64
0.19	0.63
