

# Greater Metropolitan Regional Environmental Plan No 2—Georges River Catchment (1999 EPI 52)

[1999-52]

New South Wales

## Status Information

### Currency of version

Historical version for 1 March 2020 to 25 November 2021 (accessed 17 July 2024 at 20:03)

Legislation on this site is usually updated within 3 working days after a change to the legislation.

### Provisions in force

The provisions displayed in this version of the legislation have all commenced.

### Notes—

- **Editorial note**

The Parliamentary Counsel's Office is progressively updating certain formatting styles in versions of NSW in force legislation published from 29 July 2019. For example, colons are being replaced by em-dashes. Text of the legislation is not affected.

This version has been updated.

- **Deemed SEPP**

From 1 July 2009 this plan is taken to be a State environmental planning policy (see clause 120 of Schedule 6 to the *Environmental Planning and Assessment Act 1979*).

### Authorisation

This version of the legislation is compiled and maintained in a database of legislation by the Parliamentary Counsel's Office and published on the NSW legislation website, and is certified as the form of that legislation that is correct under section 45C of the *Interpretation Act 1987*.

File last modified 1 March 2020

# Greater Metropolitan Regional Environmental Plan No 2—Georges River Catchment (1999 EPI 52)

New South Wales

## Part 1 Introduction

### 1 Name of plan

This plan is *Greater Metropolitan Regional Environmental Plan No 2—Georges River Catchment*.

### 2 Where plan applies

This plan applies to the Catchment, which is part of the region declared under the Act and known as the Greater Metropolitan Region. The Catchment consists of parts of Bankstown City, Blacktown City, Campbelltown City, Camden, Canterbury City, Fairfield City, Holroyd City, Hurstville City, Kogarah, Liverpool City, Rockdale City, Sutherland, Wollondilly and Wollongong City local government areas that are within the Georges River Catchment. The catchment map indicates the boundary of the Catchment.

### 3 Relationship to other environmental planning instruments

- (1) If this plan is inconsistent with another regional environmental plan or a local environmental plan, then this plan prevails to the extent of the inconsistency, subject to section 36 (4) of the Act.
- (2) However, this plan does not permit development which is prohibited by another environmental planning instrument.
- (3) This plan contains planning principles to help councils prepare local environmental plans that apply to the land within the Catchment.

### 4 Definitions

- (1) This plan adopts the *Environmental Planning and Assessment Model Provisions 1980*. Other terms used in this plan are defined in the dictionary at the end of this plan.
- (2) The list of contents and the notes in this plan do not form part of this plan.

## 5 Aims and objectives

(1) The general aims and objectives of this plan are as follows—

- (a) to maintain and improve the water quality and river flows of the Georges River and its tributaries and ensure that development is managed in a manner that is in keeping with the national, State, regional and local significance of the Catchment,
- (b) to protect and enhance the environmental quality of the Catchment for the benefit of all users through the management and use of the resources in the Catchment in an ecologically sustainable manner,
- (c) to ensure consistency with local environmental plans and also in the delivery of the principles of ecologically sustainable development in the assessment of development within the Catchment where there is potential to impact adversely on groundwater and on the water quality and river flows within the Georges River or its tributaries,
- (d) to establish a consistent and coordinated approach to environmental planning and assessment for land along the Georges River and its tributaries and to promote integrated catchment management policies and programs in the planning and management of the Catchment,
- (e) (Repealed)
- (f) to provide a mechanism that assists in achieving the water quality objectives and river flow objectives agreed under the Water Reform Package.

(2) The specific aims and objectives of this plan are as follows—

### **Environmental protection and water quality and river flows**

- (a) to preserve and protect and to encourage the restoration or rehabilitation of regionally significant sensitive natural environments such as wetlands (including mangroves, saltmarsh and seagrass areas), bushland and open space corridors within the Catchment, by identifying environmentally sensitive areas and providing for appropriate land use planning and development controls,
- (b) to preserve, enhance and protect the freshwater and estuarine ecosystems within the Catchment by providing appropriate development,
- (c) to ensure that development achieves the environmental objectives for the Catchment.

### **Regional role and land use**

- (a) to identify land uses in the Catchment which have the potential to impact adversely on the water quality and river flows in the Georges River and its

tributaries and to provide appropriate planning controls aimed at reducing adverse impacts on the water quality and river flows,

- (b) to conserve, manage and improve the aquatic environment within the Catchment which is a significant resource base for the aquaculture industry, by providing controls aimed at reducing pollution entering the Catchment's watercourses,
- (c) to protect the safety and well being of the local and regional community in accordance with standards and processes aimed at improving the water quality and river flows in the Catchment to enable recreation,
- (d) to aid in the improvement of the environmental quality of Botany Bay in conjunction with other regional planning instruments.

## **6 Savings**

- (1) The provisions of this plan do not apply to or in respect of—
  - (a) a development application or an application for approval of an activity that was lodged with a consent authority or determining authority, but that was not finally determined, before the commencement of this plan, or
  - (b) the development or activity allowed to be carried out by a consent or an approval of an activity granted in response to any such application (but only if the consent or approval is in fact granted) or in response to an application for a consent or approval of an activity by a determining authority granted before that commencement.
- (2) If a development application has been made before the commencement of *State Environmental Planning Policy Amendment (Planning for Bush Fire Protection) 2020* in relation to land to which this plan applies and the application has not been finally determined before that commencement, the application must be determined as if that Policy had not commenced.

## **Part 2 Planning principles**

### **7 When planning principles are to be applied**

This Part applies when—

- (a) a council prepares a local environmental plan, or
- (b) a consent authority determines a development application, or
- (c) a public authority or another person proposes to carry out development or an activity which does not require development consent but which has the potential to adversely affect the water quality, river flows, flood regime or ecosystems within the Catchment.

## **8 General principles**

When this Part applies the following must be taken into account—

- (a) the aims, objectives and planning principles of this plan,
- (b) the likely effect of the proposed plan, development or activity on adjacent or downstream local government areas,
- (c) the cumulative impact of the proposed development or activity on the Georges River or its tributaries,
- (d) any relevant plans of management including any River and Water Management Plans approved by the Minister for Environment and the Minister for Land and Water Conservation and best practice guidelines approved by the Department of Urban Affairs and Planning (all of which are available from the respective offices of those Departments),
- (e) the *Georges River Catchment Regional Planning Strategy* (prepared by, and available from the offices of, the Department of Urban Affairs and Planning),
- (f) all relevant State Government policies, manuals and guidelines of which the council, consent authority, public authority or person has notice,
- (g) whether there are any feasible alternatives to the development or other proposal concerned.

## **9 Specific planning principles**

When this Part applies, the following must be taken into account—

### **(1) Acid sulfate soils**

Disturbance of acid sulfate soil areas is to be avoided or minimised and those areas are to be protected in accordance with the requirements set out in the *Acid Sulfate Soils Assessment and Management Guidelines* prepared by the Acid Sulfate Soils Management Advisory Committee. Measures to minimise that disturbance are to take into account the following—

- (a) verification of the existence, locations and extent of acid sulfate soils,
- (b) the capacity of land to sustain the proposed land uses, having regard to—
  - (i) potential impacts on surface and groundwater quality and quantity, and
  - (ii) potential impacts on ecosystems and on biodiversity, and
  - (iii) potential impacts on agricultural, fisheries and aquaculture productivity, and
  - (iv) any likely engineering constraints and impacts on infrastructure, and

(v) cumulative environmental impacts.

**(2) Bank disturbance**

Disturbance of the bank or foreshore along the Georges River and its tributaries is to be avoided and those areas and any adjoining open space or vegetated buffer area must be protected from degradation.

**(3) Flooding**

The following are to be recognised—

- (a) the benefits of periodic flooding to wetland and other riverine ecosystems,
- (b) the pollution hazard posed by development on flood liable land in the event of a flood,
- (c) the cumulative environmental effect of development on the behaviour of flood water and the importance of not filling flood prone land.

**(4) Industrial discharges**

The discharging of industrial waste into the Georges River or its tributaries must be avoided and the requirements of the relevant consent authority and licensing authority must be met in those instances where industrial discharges into the river and its tributaries occur.

**(5) Land degradation**

Land degradation processes, such as—

- (a) erosion,
- (b) sedimentation,
- (c) deterioration of soil structure,
- (d) significant loss of native vegetation,
- (e) pollution of ground or surface water,
- (f) soil salinity and acidity, and
- (g) adverse effects on habitats and sensitive natural environments (aquatic and terrestrial) within the Catchment,

must be avoided where possible, and minimised where avoidance is not possible.

**(6) On-site sewage management**

The potential adverse environmental and health impact associated with effluent

disposal is to be recognised and guarded against by meeting the criteria set out in the *Environment Health Protection Guidelines: On-site Sewage Management for single households* and the provisions of the *Local Government (Approvals) Regulation 1993*.

**(7) River-related uses**

Uses located on immediate foreshore land on the Georges River and its tributaries must be water-related and public access to the foreshore of the river and its tributaries must be provided in order to enhance the environment of the Catchment.

**(8) Sewer overflows**

The adverse impact of sewer overflows, including exfiltration, on the environment within the Catchment, and specifically on the water quality of the river and its tributaries, is to be recognised and that issue is to be addressed through appropriate planning and management of development within the Catchment.

**(9) Urban/stormwater runoff**

The impacts of stormwater runoff, including sewage contaminated runoff into or near streams within the Catchment, is to be minimised and mitigation measures that address urban stormwater runoff are to be implemented in accordance with the local council requirements and the Managing Urban Stormwater series of documents. Development is also to be in accordance with the *NSW State Rivers and Estuaries Policy* available from offices of the Department of Urban Affairs and Planning. Stormwater management must be integrated so that quality, quantity and land use aspects are all encompassed.

**(10) Urban development areas**

The environment within the Catchment is to be protected by ensuring that new or expanding urban development areas are developed in accordance with the Urban Development Program and the Metropolitan Strategy and that the requirements of the *NSW Floodplain Development Policy and Manual* (prepared by and available from the Department of Land and Water Conservation) are also satisfied. It is important to ensure that the level of nutrients entering the waterways and creeks is not increased by the development.

**(11) Vegetated buffer areas**

Appropriate buffer widths (as identified in item 21 relating to Development in Vegetated Buffer Areas in the Planning Control Table in Part 3) must be retained as a means of improving surface runoff entering into the Georges River or its tributaries.

**(12) Water quality and river flows**

Water quality and river flows within the Catchment are to be improved through the

implementation of environmental objectives for water quality and river flows agreed between the Minister for Environment and the Minister for Land and Water Conservation and by the application of consistent decisions affecting the use and management of land.

(13) **Wetlands**

Wetlands must be protected through the application of consistent land use and management decisions that take into account the potential impact of surrounding land uses, incorporate measures to mitigate adverse effects and are in accordance with the *NSW Wetlands Management Policy* (prepared by and available from the Department of Land and Water Conservation). Wetlands must also be protected by requiring adequate provisions where clearing, construction of a levee, draining or landscaping is to be undertaken.

### Part 3 Planning requirements

**10 (Repealed)**

**11 Planning control table**

- (1) The planning control table at the end of this clause deals with development defined in that table.
- (2) Under **Planning control**:
  - (a) **Development consent** means that the development may be carried out only with development consent, and
  - (b) **Prohibited** means the development must not be carried out (either generally or only in the circumstances specified), and
  - (c) **Advertised** means the development is identified as advertised development for the purposes of the definition of **advertised development** in section 4 (1) of the Act, and
  - (d) **Designated development** means that the development is declared to be designated development for the purposes of the Act.
- (3) (Repealed)
- (4) Under **Specific matters for consideration**, matters are listed for consideration by the consent authority when determining a development application or (if consent is not required) by the public authority or person concerned before carrying out the development.
- (5) The council of the area in which development is proposed to be carried out is the **consent authority** for a development application required by this plan, except as

provided otherwise by the Act.

## PLANNING CONTROL TABLE

### 1 ARTIFICIAL LAKE

#### Definition

Construction of a water body such as an artificial wetland or dam, but not a dam of less than 1 hectare in surface area used for agricultural purposes or land flood-irrigated for agriculture.

#### Planning control

Development consent required unless carried out by or for the Chipping Norton Lakes Authority in which case development consent is not required.

Advertised.

#### Specific matters for consideration

The likely impact of the proposal on the water table.

The likely impact of the proposal on natural flows in the Georges River and its tributaries.

The likely impact of the proposal on other downstream water users in the Catchment.

Whether the proposal will contribute to enhancing both the recreational and environmental amenity within the Catchment.

If the proposal is part of rehabilitation works, whether the proposal is in keeping with an approved rehabilitation plan.

Whether the proposal is likely to result in a propagation zone for noxious aquatic weeds.

The likelihood of the development of algal blooms and measures proposed to control that.

### 2 AQUACULTURE

#### Definition

Farming of aquatic organisms (including fish, molluscs, crustaceans and aquatic plants) for commercial purposes, requiring intervention in the rearing process to enhance production, whether or not undertaken in a natural or artificially created water body.

#### Planning control

Development consent required.

Advertised.

**Note—**

Owner's consent for proposed development or an activity on Crown land is required from the Department of Lands.

**Specific matters for consideration**

The potential impact of the proposal on seagrass beds.

The impact of related activities, including the coating of fishing accessories with protective finishes, the transport of cages, racks and other accessories onshore and the cleaning of cages, racks and other accessories. In this regard, consideration is also to be given to the provisions made for the disposal of waste.

The impact of aquaculture additives on water quality within the Georges River and its tributaries.

Whether acceptable health criteria for shellfish are met.

The potential for impacts arising from possible damage from floods, stormwater and erosion.

### **3 CARAVAN PARKS**

**Definition**

Use of land for caravans or other moveable dwellings requiring an approval under Part 1 of Chapter 7 of the [Local Government Act 1993](#).

**Planning controls**

Development consent required unless on flood liable land in which case it is prohibited.

Permanent facilities and sites identified for long term use as caravan parks are prohibited on land within 40 metres of the Georges River or its tributaries (in this item referred to as "the buffer zone").

Advertised.

**Note—**

A licence from the Environment Protection Authority may be required for sewage disposal.

**Specific matters for consideration**

The impact of the proposal on remnant vegetation.

If the caravan park is located on land adjoining the buffer zone, public access to the park is to be restricted to clearly identified pathways. The buffer zone is to be planted

or, where vegetated, the vegetation is to be retained, between the Georges River or its tributaries and the caravan park or camping ground.

Sewage treatment and disposal from such sites.

Whether approvals have been sought for access points, such as boat ramps and jetties, to the river.

#### **4 CHEMICAL OR FUEL STORAGE ON LAND**

##### **Definition**

Use of land for chemical, fuel or fertiliser storage.

##### **Planning controls**

Prohibited on flood liable land.

Development consent required for all other land.

##### **Specific matters for consideration**

That adequate provisions have been made to contain water that may be contaminated by its use for fire control purposes.

Whether the proposal meets the requirements of the local council's stormwater management plan or, if no such plan is prepared, the local council's stormwater management objectives or policy determined by the council.

Whether the proposal is in accordance with the local council's soil erosion and sediment management plan or policy.

Any impacts on groundwater.

Provision for on-site bush fire hazard reduction where relevant.

#### **5 EXTRACTIVE INDUSTRY**

##### **Definition**

The winning of extractive material, or an undertaking which depends for its operations on the winning of extractive material, from land within the Catchment, including any washing, cutting, crushing, grinding, milling or separating into different sizes of extractive material on the site on which it has been won.

##### **Planning control**

Development consent is required unless the proposed development—

(a) is in-stream, in which case it is prohibited, or

- (b) is part of an operation to carry out maintenance dredging by a public authority and the consent authority is satisfied that the proposal is in accordance with the principles and objectives contained in the *NSW Sand and Gravel Extraction Policy for Non Tidal Rivers*, in which case consent is not required.

**Specific matters for consideration**

The likely effect of the proposal on flood behaviour, geomorphology, vegetation, surface and groundwater quality, water quality, water quantity and hydrodynamics of any watercourse within the Catchment.

Whether a Rehabilitation Plan has been prepared in accordance with the Guidelines established by the Department of Land and Water Conservation in its *Urban Erosion and Sediment Control Handbook* (1992).

Whether the noise and vibration levels are generally in accordance with the guidelines in the *Environmental Noise Control Manual* (1994) prepared by the Environment Protection Authority.

Satisfaction that any proposed rehabilitation measures will be carried out in accordance with the guidelines in the *Managing Urban Stormwater Soils and Construction Handbook* (1998) prepared by and available from Landcom and the Department of Housing.

**6 FLOOD CONTROL WORKS**

**Definition**

The carrying out of any works in an attempt to mitigate against flooding if the works will change the natural or existing condition of the Georges River or its tributaries, including river flows.

**Planning controls**

Development consent required.

Advertised.

**Specific matters for consideration**

Whether the proposal satisfies the stormwater management plan prepared by the local council or, until such a plan is made, the local council's stormwater management objectives.

Whether the proposal is in accordance with the Council's soil erosion and sediment management plan or policy.

Whether the proposal is consistent with State Government policies including the New South Wales Government's *Floodplain Development Manual: the management of flood*

*liable land* (April 2005, ISBN 0 7347 5476 0).

## **7 HAZARDOUS OR OFFENSIVE, OR POTENTIALLY HAZARDOUS OR OFFENSIVE INDUSTRIES**

### **Definition**

Hazardous or offensive industry (as defined in [State Environmental Planning Policy No 33—Hazardous and Offensive Development](#)) of a type that has the potential to pollute and to lower water quality in the Georges River or its tributaries.

### **Planning controls**

Development consent required unless located on either flood liable land or land within 40 metres of any watercourse within the Catchment, in which case it is prohibited.

Advertised.

### **Specific matters for consideration**

Whether adequate provisions have been made to contain water that may be contaminated by its use for fire control purposes.

Whether the proposal meets the requirements of the local council's stormwater management plan or, if no such plan has been prepared, the local council's stormwater management objectives or policy determined by the council.

Whether the proposal is in accordance with the Council's soil erosion and sediment management plan or policy.

Whether any potential impacts will arise in regard to groundwater.

Whether adequate provisions for on-site bushfire hazard reduction are made.

## **8 HOUSING DEVELOPMENT**

### **Definition**

Development of land for housing, including the following—

- (a) development of new areas for housing in accordance with the Urban Development Program and the Metropolitan Strategy, and
- (b) rural-residential development within the Catchment.

### **Planning control**

#### **For land included in the Urban Development Program:**

Development consent required for land identified in the Urban Development Program unless the land is not connected to a reticulated sewerage system or is

flood liable, in which case it is prohibited.

**For rural residential land, being land within a rural zone on which residential development is allowed by a local environmental plan:**

Development consent required.

**Specific matters for consideration**

**For land within the Urban Development Program:**

Whether the proposal for development accords with the Metropolitan Strategy and satisfies the strategy's goals and key principles.

Whether the land is adequately serviced.

Whether adequate provision has been made to meet the requirements of any council stormwater management plans and erosion and sediment control plans or policies.

Whether provision has been made for sediment and/or erosion control during construction in accordance with best practice.

Whether adequate provision has been made to prevent untreated urban runoff including nutrients, oils and greases, animal wastes, detergents and other pollutants from car washing and general litter entering into the Georges River or its tributaries.

**Note—**

The suitability of urban runoff treatment measures may include one or more of the following—

- (a) directing runoff onto artificial wetlands,
- (b) directing runoff into grassed drainage lines and table drains,
- (c) use of on-site detention basins,
- (d) gross pollutant traps,
- (e) adequate sediment and erosion controls.

Any treatment measures will need to be in accordance with the *NSW State Rivers and Estuaries Policy* and have the necessary approval of the Department of Land and Water Conservation.

The provision of planted areas and the minimisation of hard surface areas mitigates against increased urban runoff from built up areas and must be encouraged. Reuse of treated waste water and the utilisation of appropriate water conservation practices must also be encouraged.

Whether adequate provision has been made to incorporate vegetated buffer areas to watercourses, foreshores or other environmentally sensitive areas.

The potential cumulative environmental impact of urban runoff on the Georges River or its tributaries.

**For land that is not reticulated, including rural residential land:**

Whether the proposal meets the requirements of a strategy prepared by the local council for sewage management or adequate provision has been made for on-site sewage management.

**9 INDUSTRY**

**Definition**

The manufacturing, assembling, altering, repairing, renovating, ornamenting, finishing, cleaning, washing, dismantling, processing or adapting of any goods or articles for commercial purposes (other than development defined elsewhere in this table).

**Planning controls**

Development consent required.

Advertised unless involving minor works such as refurbishment, refitting and the like or involving an occupation that is a light industrial activity, in which case not advertised development.

**Specific matters for consideration**

The potential cumulative environmental impact of any industrial uses on water quality within the Catchment.

The adequacy of proposed stormwater controls and whether the proposal meets the Council's requirements for stormwater management.

Whether proposed erosion control measures meet the criteria set out in *Managing Urban Stormwater: Soil and Construction Handbook* (1998) prepared by and available from Landcom and the Department of Housing.

Likely impact on groundwater and remnant vegetation.

The possibility of reusing treated waste water on land and the adequacy of proposed waste water disposal options.

Whether adequate provision has been made to incorporate vegetated buffer areas to protect watercourses, foreshores or other environmentally sensitive areas where new development is proposed.

The adequacy of planned waste water disposal options.

## **10 INTENSIVE HORTICULTURAL ACTIVITIES**

### **Definition**

Use of a place to grow a commercial crop of plants or fungi, whether under cover or in the open, using intensive agricultural systems such as hydroponics or a sprinkler system (but not use of a place to grow produce for personal household consumption or enjoyment) which has the potential to impact significantly on the total water cycle.

### **Planning controls**

Development consent required.

Advertised.

### **Specific matters for consideration**

Whether adequate provision has been made for flood mitigation in the event of a 1 in 10 year flood event.

Whether adequate provision has been made for a vegetated buffer area adjacent to watercourses.

Whether adequate provision has been made in relation to soil erosion control.

Whether adequate provision has been made to protect groundwater and the Georges River or its tributaries where chemical application is to be undertaken on land adjacent to watercourses.

Opportunities for retention and reuse of site surface runoff.

## **11 INTENSIVE LIVESTOCK KEEPING**

### **Definition**

Use of land for holding cattle, sheep, goats, poultry or other livestock for the purpose of nurturing by a feeding method other than natural grazing, including use of—

- (a) feed lots, and
- (b) piggeries, and
- (c) poultry farms,

but not an animal boarding or training establishment or land used for the keeping of livestock or poultry intended solely for personal consumption or enjoyment by the owner or occupier of the land, or intensive hand feeding of livestock as a result of drought, flood, bushfire or other natural disaster.

### **Planning controls**

Development consent required unless—

(a) on land within 40 metres of the Georges River or its tributaries, or

(b) carried out within a floodway,

in which case it is prohibited.

Advertised.

**Specific matters for consideration**

Whether farm management including the use of appropriate best management practices is proposed so as to mitigate the impact of the development on the water quality of the Georges River or its tributaries.

Whether adequate provision has been made in relation to soil erosion control.

The likely additional impact of the development on the Georges River during a flood event where development is proposed on flood prone land.

Whether adequate provision has been made for a vegetated buffer area adjacent to watercourses.

Whether adequate provision has been made to protect groundwater and the Georges River and its tributaries from nutrient enrichment.

**12 LAND FILL**

**Definition**

Use of land for the purpose of disposing of waste, including use of a site for the collection and disposal of industrial, trade or human waste (other than development defined elsewhere in this table).

**Planning control**

Development consent required unless on flood liable land, in which case it is prohibited.

Advertised.

**Specific matters for consideration**

Whether groundwater contamination is likely to occur.

The adequacy of any proposed leachate management system and surface water controls.

The long-term stability of the final landform and the adequacy of a site management plan prepared for the development.

## 13 MAINTENANCE DREDGING

### Definition

The winning or removal of extractive material from the bed of the Georges River or its tributaries by or for a public authority for the purpose of obtaining sufficient width and depth in the waterway to enable the waterway to continue to function—

- (a) as a channel for the escape or passage of water, or
  - (b) as a safe navigation route for travel or transport by water,
- but not including bank or bed works.

### Planning control

Development consent required.

#### Note—

*State Environmental Planning Policy (Infrastructure) 2007* makes provision with respect to maintenance dredging carried out by or on behalf of a public authority.

### Specific matters for consideration

The likely effects of maintenance dredging on river flows, water quality, geomorphology, flood behaviour and bank stability.

The need to maintain river shallows to protect and support the aquatic habitat.

The potential effect of maintenance dredging on recreational opportunities available in the Catchment.

The need to protect fish breeding grounds, commercial and recreational fishing areas and oyster farming.

The need to protect seagrass beds and mangroves.

The likelihood of disturbing pollutants, sediments and acid sulfate soils and any proposed mitigation measures.

The advantages of using cutter-suction methods as against dragline methods when carrying out maintenance dredging.

## 14 MANUFACTURED HOME ESTATES

### Definition

Development for the purpose of placing of manufactured homes requiring an approval under Part 1 of Chapter 7 of the *Local Government Act 1993*, except where they will be located on land which is zoned for residential purposes.

### **Planning control**

Development consent required unless the proposed development is on flood liable land or sites which are or will not be adequately provided with reticulated water, a reticulated sewerage system, drainage or electricity, in which case it is prohibited.

Advertised.

### **Specific matters for consideration**

The likely impact on any significant remnant vegetation.

Whether adequate provision is made for vegetated buffer areas on land adjacent to watercourses or environmentally sensitive areas.

That the development will not have an adverse impact on any waterway or land having special landscape, scenic or ecological qualities.

#### **Note—**

The provisions of [State Environmental Planning Policy No 36—Manufactured Home Estates](#) would also need to be satisfied.

## **15 MARINAS AND SLIPWAYS**

### **Definition**

Development for the purpose of a pontoon, jetty, pier or other structure or apparatus providing berths for boats, and use of adjoining land for any support facilities.

### **Planning control**

Development consent required unless carried out by or on behalf of the Chipping Norton Lakes Authority, in which case development consent is not required.

Advertised.

#### **Note—**

Owner's consent for proposed development or an activity on Crown land is required from the Department of Land and Water Conservation. Some marinas are scheduled under the [Protection of the Environment Operations Act 1997](#) if the size is above a certain threshold.

### **Specific matters for consideration**

The need for a condition of consent requiring centralised pumping stations.

Whether adverse impacts will occur on any natural wetlands, seagrass beds, mangroves and any other flora and fauna habitats.

Whether arrangements for the collection, storage, treatment and subsequent disposal of sewage and other wastes are satisfactory and meet the requirements of the

Environment Protection Authority.

Whether measures to prevent the escape of fuels, oils, grease and other chemicals into the waterway are adequate.

Whether the proposal satisfies the document entitled *Environmental Guidelines: Best Management Practice for Marinas and Slipways* (1997) prepared by and available from the Environment Protection Authority.

Whether adequate depth of water exists for the marina and other related land and water shoreline facilities and, if not, whether the means proposed for maintaining adequate water depth are appropriate and will not lead to adverse impacts on the Georges River or its tributaries.

The stability of banks and foreshores and whether acid sulfate soils are likely to be disturbed.

## **16 PUBLIC UTILITY UNDERTAKING**

### **Definition**

Any of the following undertakings carried on by or for a public authority that is likely to significantly affect the water quality and river flows of the Georges River or its tributaries and the environment within the Catchment—

- (a) rail, road, air or water transport,
- (b) provision or maintenance of wharfs and navigation markers,
- (c) telecommunications,
- (d) supply of water, electricity or gas or provision of sewerage or drainage services.

### **Planning control**

The controls set out in the local environmental plan or deemed environmental planning instrument for the land.

## **17 RECREATIONAL FACILITIES**

### **Definition**

Use of a building, work or place for sporting activities, recreation or leisure activities (whether or not operated for commercial gain) being a building that is situated within the Georges River, on land that is situated within the Georges River or on land—

- (a) that adjoins the river or a tributary of the river, or
- (b) that is flood prone land.

### **Planning control**

Development consent required.

Advertised.

### **Specific matters for consideration**

Whether the proposal will encourage bank erosion and the adequacy of any proposed mitigation measures.

The need to retain and maintain riparian vegetation and habitat.

Whether acid sulfate soils will be disturbed by the proposed development and the adequacy of any mitigation measures.

Any proposed effluent disposal system for areas not connected to a reticulated sewerage system.

The suitability of the site for on-site sewage disposal and the likely effect of that disposal on the Georges River or its tributaries, any natural wetland areas, groundwater or flood liable land.

The possibility for reuse of treated waste water on land, for irrigation purposes.

Recreation facilities must not obstruct, alienate or pollute the river.

The impact of the proposal on access and use of the Georges River and its tributaries and foreshores.

## **18 SINGLE MOORINGS**

### **Definition**

Provision or maintenance of a berth or apparatus located on or in the Georges River or its tributaries which may be used for the purpose of storing only one vessel.

### **Planning control**

Development consent required unless seagrass beds identified by NSW Fisheries are located on the site, in which case it is prohibited, or unless carried out for or by the Chipping Norton Lakes Authority, in which case development consent is not required.

Advertised.

### **Specific matters for consideration**

The likely impact on any seagrass beds located at the site or within the vicinity of the proposed development.

The type and size of vessel proposed to be moored.

Any requirements for dredging where water depth is inadequate and whether an environmental impact statement is required.

Possibility of developing shared facilities with an adjoining owner.

## **19 SEWERAGE MANAGEMENT SYSTEMS OR WORKS**

### **Definition**

Development for the purpose of any sewerage system or work which stores, treats or disposes of sewage (including domestic on-site disposal systems that are ancillary to other development which requires consent) but not including a public utility undertaking.

### **Planning control**

Development consent required.

Advertised.

### **Specific matters for consideration**

Whether the proposed development will be capable of connection to a Sydney Water Corporation Limited or council sewerage system either now or in the future.

The suitability of the site for on-site disposal of effluent or sludge and the ability of the sewerage systems or works to operate over the long-term without causing significant adverse effects on adjoining property. Where the proposal is for single dwelling residential development not connected to a reticulated sewerage system, the *Environment and Health Protection Guidelines—On-site Sewage Management for Single Households* (1998) prepared by and available from the Department of Local Government, the Department of Land and Water Conservation, the Department of Health and the Environment Protection Authority must be followed.

The likely effect of any on-site disposal area required by the proposed development on—

- (a) any water bodies in the vicinity, including rivers, streams, creeks, dams, or
- (b) any wetland areas identified and mapped by the National Parks and Wildlife Service, or
- (c) any groundwater, or
- (d) any flood liable land within the Catchment.

The sewage management facility or, in the case of on-site disposal systems, the effluent application area should make provision for the following—

- (a) preventing the spread of disease by micro-organisms, emission of foul odours,

contamination of water and degradation of soil and vegetation, discouraging insects and vermin and ensuring that persons do not come into contact with untreated sewage or effluent (whether treated or not) in their ordinary activities on the premises,

- (b) the reuse of resources (including nutrients, organic matter and water) and the minimisation of any adverse impacts on the amenity of the land on which the facility or area is installed or constructed and other land in the vicinity of that land,
- (c) the scope for recycling and reusing effluent or sludge on the site,
- (d) the adequacy of wet weather storage and the wet weather treatment capacity (as necessary) of the proposed sewerage system or works,
- (e) likely cumulative impacts downstream where direct discharge of effluent to the Georges River or its tributaries is proposed,
- (f) the need for ongoing monitoring of the system or work.

**Note—**

Direct discharge into the Georges River or its tributaries is strongly discouraged. Where that is permitted, the standards set by the Environment Protection Authority must be satisfied.

## **20 STORMWATER MANAGEMENT SYSTEM OR WORKS**

### **Definition**

Carrying out of works designed to collect, channel, store, treat or disperse stormwater runoff from areas of urban development or from development adjacent to the Georges River or its tributaries. Untreated stormwater is water which has not been subjected to measures designed to reduce litter, suspended solids, nutrients or other substances which contribute to a decline in the quality of water in the Georges River or its tributaries.

### **Planning control**

Development consent is required except where works are by or on behalf of a public authority.

Works that dispose of untreated stormwater into the Georges River or its tributaries are prohibited.

Advertised.

### **Specific matters for consideration**

That untreated stormwater is not disposed of into the Georges River or its tributaries.

The likely impact of stormwater disposal on the quality of any receiving waters.

That the levels of nutrients and sediments entering the waterway are not increased by the proposed development.

Whether any proposals to manage stormwater are in accordance with the local council's stormwater management plans and the Managing Urban Stormwater series of documents and meet the local council's stormwater management objectives.

Whether the principles outlined in the *Managing Urban Stormwater Soils and Construction Handbook* (1998) prepared by and available from Landcom and the Department of Housing are followed during each stage of a development (including subdivision).

Whether the proposal satisfies the local council's sediment control plan or, if no such plan has been prepared, any erosion and sediment policies adopted by the local council.

**Note—**

The suitability of stormwater treatment measures will depend on the characteristics of individual sub-catchments. Those measures may, however, include one or more of the following—

- (a) artificial wetlands,
- (b) detention basins,
- (c) grassed drainage lines and table drains,
- (d) trash racks,
- (e) booms.

Source control is to be preferred to downstream engineering solutions and natural treatments instead of hard engineering treatments for watercourses and drainage lines are to be encouraged.

## **21 DEVELOPMENT IN VEGETATED BUFFER AREAS**

### **Definition**

Development on land within the Catchment that adjoins, and is within 100 metres of, a drainage line, creek, wetland or river foreshore area within the Catchment.

### **Planning control**

Development consent required.

### **Specific matters for consideration**

Bushfire hazard reduction measures are not to be confined to the vegetated buffer area.

Whether the proposed vegetated buffer will act as a buffer between developed land and environmentally sensitive areas, including adjacent waterways.

Whether the following specifications have been satisfied for the proposed vegetated buffer area—

- (a) 100 metre minimum buffer width from the edge of the gorge or the top of the banks of the Georges River and its tributaries on currently forested Crown lands and natural bushland classified as community land under the *Local Government Act 1993*,
- (b) 40 metre minimum buffer width from the edge of the gorge or the top of the banks of the Georges River and its tributaries on freehold land that has not been previously developed or cleared,
- (c) 40 metre minimum buffer widths from wetlands identified by the National Parks and Wildlife Service and local council State of the Environment Reports required under the *Local Government Act 1993*,
- (d) 40 metre minimum buffer width from other environmentally sensitive areas, including remnant vegetation and steep slopes, identified on maps prepared by and available from the National Parks and Wildlife Service.

The requirements of the document entitled *Planning for Bush Fire Protection*, ISBN 978 0 646 99126 9, prepared by the NSW Rural Fire Service in co-operation with the Department of Planning, Industry and Environment, dated November 2019.

The requirements of the *NSW State Rivers and Estuaries Policy* prepared by and available from the Department of Land and Water Conservation and the *NSW Wetlands Management Policy* prepared by and available from that Department where the development proposals are likely to impact on the quality of water and river flows of the Georges River or its tributaries.

The need to filter runoff from developed areas to improve water quality within the Georges River and its tributaries.

The need to reduce the loss of riparian vegetation and to remove invasive weed species.

The need to minimise damage to river banks and channels so as to reduce bank erosion.

The need to increase or maintain terrestrial and aquatic biological diversity and to provide fauna habitat and corridors.

## **22 WASTE MANAGEMENT FACILITY OR WORKS**

### **Definition**

Development for the purpose of waste management facilities or works described in Schedule 3 (Designated Development) to the *Environmental Planning and Assessment*

*Regulation 1994.*

### **Planning controls**

Development consent required unless on flood liable land, in which case it is prohibited.

Advertised.

### **Specific matters for consideration**

A system is to be required to manage leachate surface controls on the land on which the waste management facility or works is or are proposed.

A site management plan is to be required for the land on which the waste management facility or works is or are proposed.

The likelihood of groundwater contamination.

The adequacy of the proposed leachate management system and surface water controls.

The long-term stability of the final landform and the adequacy of the site management plan.

Where the proposed development involves extraction of material, whether an adverse impact on the Georges River or its tributaries will result.

## **23 WETLANDS AND FRESHWATER RIVERS—FILLING, DREDGING, DRAINING OR CLEARING**

### **Definition**

Filling, dredging, draining or clearing of wetland areas and freshwater rivers within the Catchment.

### **Planning controls**

Development consent required unless part of maintenance dredging carried out for or on behalf of a public authority, in which case development consent is not required.

Advertised.

Designated development unless the consent authority is satisfied that development is for the purpose of restoring or rehabilitating a wetland.

### **Specific matters for consideration**

Whether any native vegetation, including mangroves, will be destroyed as a result of any filling, dredging, draining or clearing.

The need to protect aquatic biological diversity.

## Dictionary

**Agreed environmental objectives** means the water quality and river flow objectives agreed by the Minister for Environment and the Minister for Land and Water Conservation.

**Bank** means a change of slope that defines the high bank of the Georges River or its tributaries or the bank which defines the channel in a geomorphic sense.

**Bank or bed works** means works carried out on the banks or the bed of the Georges River or any of its tributaries other than maintenance dredging.

**Bed** means the land which contains the Georges River and its tributaries, including that which is alternately inundated or left bare from a rise or fall in the supply of water, but does not include any land inundated only in time of flood.

**Biological diversity** means the diversity of life and is made up of the following 3 components—

- (a) genetic diversity (the variety of genes, or units of heredity, in any population), and
- (b) species diversity (the variety of species), and
- (c) ecosystem diversity (the variety of communities and ecosystems).

**Clearing** of wetlands or freshwater rivers means destroying or removing by any means—

- (a) flora which is either a remainder of the natural flora of the land or, if altered, is still representative of the structure and floristics of the natural flora (this includes the destruction or removal of the surface and subsurface soils, leaf litter, the seed bed, and any rocks, stones or pebbles), or
- (b) plants which are not native to New South Wales but which, in the opinion of the consent authority, contribute positively to the scenic quality or water quality of the locality.

However, it does not include—

- (c) destroying or removing plants declared to be noxious weeds by an order under section 7 of the [Noxious Weeds Act 1993](#) by means not likely to be significantly detrimental to the ecosystem, or
- (d) unavoidably and consequentially destroying or removing flora lying adjacent to any such noxious weeds during the process of destroying or removing those noxious weeds, or
- (e) the removal in accordance with a bush fire management plan of flora which are a bush fire hazard, or
- (f) the removal of flora in accordance with a vegetation management plan approved by the council of the area concerned.

**Cumulative environmental impact** means the combined effects on the environment of development and resource use within a locality over a period of time.

**Development** is defined in the Act.

**Ecosystems** (or ecological systems) are collections of organisms (plants and animals) and the environment (the soil, geology, water and air) in which they live.

**Ecologically sustainable development** requires the effective integration of economic and environmental considerations in decision-making processes. Ecologically sustainable development can be achieved through the implementation of the following principles and programs—

- (a) the precautionary principle—namely, that if there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

In the application of the precautionary principle, public and private decisions should be guided by—

- (i) careful evaluation to avoid, wherever practicable, serious or irreversible damage to the environment, and
  - (ii) an assessment of the risk-weighted consequences of various options,
- (b) inter-generational equity—namely, that the present generation should ensure that the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations,
  - (c) conservation of biological diversity and ecological integrity—namely, that conservation of biological diversity and ecological integrity should be a fundamental consideration,
  - (d) improved valuation, pricing and incentive mechanism—namely, that environmental factors should be included in the valuation of assets and services, such as—
    - (i) polluter pays—that is, those who generate pollution and waste should bear the cost of containment, avoidance or abatement,
    - (ii) the users of goods and services should pay prices based on the full life cycle of costs of providing goods and services, including the use of natural resources and assets and the ultimate disposal of any waste,
    - (iii) environmental goals, having been established, should be pursued in the most cost effective way, by establishing incentive structures, including market mechanisms, that enable those best placed to maximise benefits or minimise costs to develop their own solutions and responses to environmental problems.

**Environmentally sensitive natural areas** are areas where environmental characteristics mean that the potential impacts of land use are greater than elsewhere in the Catchment. Environmentally sensitive natural areas in the Catchment are the river, vegetated buffer areas (riparian land), escarpments, national parks and nature reserves, wetlands, other significant floral and faunal habitats and corridors and localities containing acid sulfate soils.

**Erosion and Sediment Control Plan** means a plan addressing all aspects of site disturbance, flow rate changes, erosion and sediment control and site rehabilitation for the duration of the relevant project.

**Fauna** means all animal life, including birds, mammals, reptiles, fish and invertebrates (such as

insects, shellfish and the like).

**Floodplain** means the floodplain level nominated in a local environmental plan or those areas inundated as a result of a 1 in 100 flood event, if no such level has been nominated.

**Flood liable land** means land identified in an environmental planning instrument as flood liable land.

**Flood prone land** means land susceptible to inundation by the probable maximum flood event.

**Floodway** means those areas of a floodplain where a significant discharge of water occurs during floods. Floodways are areas which, even if partially blocked, would cause a significant redistribution of flood flow, or a significant increase in flood levels.

**Flora** means all plant life, including higher plants (flowering plants) and lower plants (non-flowering plants such as ferns).

**Georges River and its tributaries** means all the watercourses within the Georges River Catchment.

**Habitat** means the environment that permanently, periodically or occasionally supports a plant or animal.

**Immediate foreshore land** means land within 20 metres of the top of the bank of the Georges River or its tributaries.

**In-stream extraction** means the winning of extractive material or an undertaking which depends for its operations on the winning of extractive material from the channels of the Georges River or its tributaries.

**Managing Urban Stormwater series of documents** means the following documents prepared by and available from the Environment Protection Authority—

- (a) *Managing Urban Stormwater: Treatment Techniques*,
- (b) *Managing Urban Stormwater: Soils and Construction*,
- (c) *Managing Urban Stormwater: Council Handbook* prepared by Landcom and the Department of Housing.

**Metropolitan Strategy** means the document entitled *Cities for the 21st Century* prepared by the former Department of Planning and published in 1995. It is available from offices of the Department of Urban Affairs and Planning.

**Native vegetation** unless otherwise qualified has the same meaning as the definition in section 6 of the [Native Vegetation Conservation Act 1997](#).

**Public authority** has the same meaning as in the Act.

**Remnant vegetation** means vegetation within the Catchment identified and recorded as remnant in a document available from the National Parks and Wildlife Service.

**Riparian areas** are the lands immediately adjacent to waterbodies.

**Sprinkler system** means a high or low level system with a lateral move, centre pivot, travelling

irrigator, side roll, end tow or hand shift sprinkler head.

**Terrestrial ecosystems** are those ecosystems that are land-based, including woodlands, grasslands and forests.

**The Act** means the [Environmental Planning and Assessment Act 1979](#).

**The Catchment** means the Catchment of the Georges River.

**The catchment map** means the map marked “*Georges River Catchment Boundary*” deposited in the Head Office of the Department of Urban Affairs and Planning.

**Threatened species, populations and ecological communities** has the same meaning as in the [Threatened Species Conservation Act 1995](#).

**Urban Development Program** means the government land release system managed by and available from the Department of Urban Affairs and Planning.

**Watercourse** means a river or stream, whether perennial or intermittent, flowing in a natural channel with an established bed or in a natural channel artificially modifying the course of the stream.

**Water quality objectives** means the objectives approved for the Catchment by the Minister for the Environment and the Minister for Land and Water Conservation.

**Water Reform Package** means the documents so identified prepared by the Department of Land and Water Conservation aimed at reforming the use of the State’s waterways. They are available from the offices of that Department.

**Water-related development** means development such as jetties, ramps and pontoons located on land within 20 metres of the Georges River or its tributaries.

**Waste** includes any matter or thing whether solid, gaseous or liquid or a combination of any solids, gases or liquids that is discarded or is refuse from processes or uses (such as domestic, medical, industrial, mining, agricultural or commercial processes or uses).

**Wetlands** means an area with characteristics of both terrestrial and aquatic environments that is flooded or waterlogged often enough to support aquatic or other plants typical of areas with those characteristics.
